Application No.: 10/565,067 Docket No.: SONYJP 3.3-462

## IN THE CLAIMS

- 1. 7. (cancelled)
- 8. (currently amended) A display apparatus having a backlight section and a load other than said backlight section, said display apparatus comprising:

an input-voltage generation section for generating a direct current input voltage from an alternating ve current;

a first power conversion section including a primary side for receiving said direct current input voltage, as well as and a secondary side isolated from said primary side and used for generating a direct current power-supply voltage to be supplied to said load as a result of a DC-DC power conversion process carried out on said direct current input voltage;

a second power conversion section including a primary side for receiving said direct current input voltage, as well as and a secondary side isolated from said primary side and used for generating a power-supply voltage to be supplied to said backlight section; and

a display section for displaying a picture <del>by</del> using said backlight section.

- 9. (currently amended) A display The power supply apparatus according to claim 8, wherein a plurality of said backlight sections is employed as a light source of said display section and as many said second power conversion sections as said backlight sections are provided.
- 10. (currently amended) A display The power supply apparatus according to claim 8, wherein+\_a fluorescent tube is employed as said backlight section\_+ and\_said second power conversion section carries out power conversion process by performing a DC-AC power conversion process to generate an alternatingve current as said power-supply voltage to be supplied to said fluorescent tube.

Application No.: 10/565,067 Docket No.: SONYJP 3.3-462

11. (currently amended) A display The power supply apparatus according to claim 8, wherein+ a fluorescent tube is employed as said backlight section, + and said second power conversion section carries out power conversion process by performing a DC-DC power conversion process to generate a direct current as said power-supply voltage to be supplied to said light-emitting diode.
